

AMAZONIKA

Three hundred million people worldwide live in forests and 1.6 billion depend on them for their livelihoods.

These ecosystems are much more than a collection of trees, they are home to 80 per cent of the world's terrestrial biodiversity.

BACKGROUND: THE HUMAN HIGHWAY TO HELL

Forests provide habitat for a vast variety of plants and animals, many of which are still undiscovered and are going to be destroyed.

The Amazon makes up nearly a third of all the tropical rainforests left on Earth, making it a vital part in sustaining life on the planet.

LET US

REWRITE

THE CHILDREN'S BOOK

GREEN REVOLUTION

The man-made environmental destruction has reached such an extent that humanity is destroying itself. Because of our behavior, damaging economic areas and delayed social & political action, we have developed Amazonika.

Therefore we have developed a solution that automatically makes economy consumption and the economy sustainable without people having to actively decide: the first sustainable currency. Currencies are the blood cells of global society. We make this green. With every purchase that people make, whether between companies or for private consumption, 80% of the transaction-fee's are invested straight into the Amazonika-Wallet that is linked to plenty NGO's and Foundations that support the Rainforest and help to move our planet in more sustainable fields.

Amazonika burns Tokens and saves the Rainforest. With the project being the first fully blockchain based approach to support sustainability and green movement, Amazonika facilitates a brand new long-term investment opportunity that will generate returns but more importantly changes the world for the better - More precisely 10 Billion Tokens are allocated to charity purposes.

We present the NGOs that we support transparently on our website and at the same time have another function in mind. Every shareholder of Amazonika Tokens can propose new NGOs and vote on which NGOs should be supported next. Accordingly, every like-minded person is linked to our Amazonika Wallet and is part of the green revolution.

TOKENOMICS

Amazonika launches with a maximum total supply of 1 Trillion Token, with 30% of the supply being burned at the coin-launch as a deflationary force on the token. Every transaction with Amazonika incurs a 10% fee, of which 80% goes to charity, split in different NGO's & foundation and 20% is used for marketing purposes. With the total amount burned growing over time, the amount of available supply and yield generated decreases as the burn rate increases, forcing currency appreciation and the protection of the asset-value.
